

M3PRO 1-5 MID

Three-phase Digital Energy Meter
CT connected (.../5 A or .../1 A)

Operating instructions

The Energy Meter provides all relevant measures for the evaluation of an electrical network: L, U, PF, THD%, Powers (displayed for each phase and 3-phase) and Imported/Exported Active/Reactive Energies.

- Current range 0.01-1 (6), two possible secondary nominal currents: /1 A or /5 A
- All models are three phase digital Energy Meter with 2 tariffs and with IR lateral communication available.

The built-in communication depends on the model:

Code	Model	Communication
889-301; 889-301CH*	M3PRO 1-5 MID	2 SO Pulse outputs MID certified
889-302; 889-302CH*	M3PRO 1-5 Modbus MID	Built in RS-485 Modbus RTU MID certified
889-303; 889-303CH*	M3PRO 1-5 M-Bus MID	Built in M-Bus (1 unit Load) MID certified

(*) For Swiss market only active energy on display

⚠ RISK OF ELECTRIC SHOCK, BURNS OR EXPLOSION
This device must be installed and maintained ONLY by qualified and duly authorized personnel.
During its installation, be sure there is no voltage applied.

Frontal of the Energy Meters

UP button: to scroll pages and change parameters
DOWN button: to scroll pages and change parameters
MENU/ESC button: to change menu and stop modification procedure of a parameter
OK button: to confirm the modification of a parameter

Device Switch-on

When the device is switched on, the firmware version and the model appear on the display for one second. (Preliminary Page)

Display Back light

If no button is pushed for 40 seconds, the display goes back to the Main Page and the backlight is switched off.
The first button pushing does not change the page but is used to switch the backlight on.

Main Energy Page

1: Appears if V (L-N) >= 92 VAC
2: Three-phase energy
3: "IMPorted" / "EXPorted" flowing power direction
4: working tariff
5: Three-phase Active Energy register
6: Corresponding Partial Energy register
7: Energy Unit

Selection Menu

By Pushing [OK] from Any page of Main Menu

- Three Phase Energies List
- Phase 1 Energies List
- Phase 2 Energies List
- Phase 3 Energies List
- Three Phase Instantaneous measures active power, reactive power, apparent power, frequency, neutral current
- Phase L1, L2 & L3 Instantaneous measures active power L1, active power L2, active power L3, reactive power L1, reactive power L2, reactive power L3, apparent powers, line voltages, system voltages, phase current, power factors, voltage THDs, currents THDs
- Parameters List (Read and/or Modify)
- Partial Energies Reset Procedure
- Firmware checksum
- Firmware version
- Display test

(*) access can be protected by Password (see Password chapter)

Parameters in models with M-Bus on-board

M-Bus Primary Address. Selectable in the range 1...250. The default value is 0, but, once modified to a value 1...250, it is no longer possible to go back to 0.

M-Bus Baud Rate. Available Baud Rates are: 300, 600, 1200, 2400, 4800 and 9600. The default baud rate is 2400.

Unique M-Bus Secondary Address, not modifiable.

Password

In Configure Menu it is possible to protect the access to sub-menus of Selection Menu by a password. Password can be enabled (ON password) or disabled (OFF password), the default value is OFF.

Once requested, to enter the password user must push both UP button and DOWN button at the same time for 4 seconds

Partial Energies Reset Procedure

When this page is on the display, it is possible to reset the Partial Energies (Main Energies are not resettable).

By pushing the OK button again, the Partial Energies are reset.

By pushing push MENU/ESC button or no button is pressed for 40 seconds, the procedure is stopped, and the display goes back to "Energ Reset?" page.

Phase Sequence Error

In case the cabling sequence is wrong, this message appears. In this condition, the Energy Meter continues to measure and to increase the Energy Registers, but its calculation is not correct. By pushing OK button for 5 seconds, this message disappears until next restart

Unrecoverable Internal Errors

In case the display shows these messages, the device has got a malfunction and must be replaced

2 Wires M-Bus Connection (Polarity Independent)
M2 M1 M2
230 VAC T1/T2
Tariff = T2 When Voltage is Applied

① The connection of the Neutral Wire to the "N" terminal of the Power Meter is mandatory. Its connection to the Load is optional, but, in the case, only 3-phase measures (Powers and Energies) are meaningful, while measures referred to L1, L2, and L3 are meaningless.

② These manual disconnect switches are mandatory for safe installing operation. Their purpose and location must be easily evident to installation personnel

③ These fuses are not mandatory, they are recommended to protect the line, not the device itself. Use >6 A fast (F) or >1 A delayed (T).

④ Earthing of secondary windings of CTs is governed by the laws in force in the Countries where the device is installed. Current transformers must not be operated with open terminals since dangerous high voltages might occur which may result in personal injuries and property damage; furthermore, in this case the transformers are exposed to thermal overload.

Alternative wiring diagram

Alternative wiring diagram, with only 2 external CTs.

To be used only under the following conditions:

- The load is 3 wires (no neutral) and there is no current leakage (I1 - I2 - I3 = 0)
- Only 3-phase measures (Power and Energies) are meaningful.

Selecting values at secondary side

After a long pressure (5 seconds) on OK button in the Main Page, for 120 seconds the whole set of parameters displayed and transmitted through bus, are referred to Secondary Side of CTs.

Parameters List

External CT related parameters

External CT Primary nominal current
• /5A: configurable between 5 A to 10000 A with step 5 A
• /1A: configurable between 1 A to 2000 A with step 1 A
• The default value is 5 A

External CT Secondary nominal current
• /1A or /5A
• The default value is -5

Password Enabled/ Disabled

Parameters in SO model

Pulses per kWh
• 1...10000 depending on CT ratio.
• The default value is 5000

Pulse time length
• Duration of ON pulse for SO outputs: 30 to 100 ms.
• The default is 100 ms

SO outputs configuration mode
• In - Out
• SO1 proportional to Imported Active Power
• SO2 proportional to Exported Active Power

Act-React
• SO1 proportional to Imported Active Power under T1
• SO2 proportional to Imported Reactive Power under T2

TAR1-TAR2
• SO1 proportional to Imported Active Power under T1
• SO2 proportional to Imported Active Power under T2

Password Enabled/ Disabled

Parameters in models with Modbus on-board

Modbus Address. Selectable in the range 1...247. The default address is 1.

Modbus Baud Rate. Available Baud Rates are: 1200, 2400, 4800, 9600, 19200 and 38400. The default baud rate is 19200.

Modbus Parity. Available Parity are None, Even and Odd. The default Parity is None.

Modbus Number of Stop Bits (1 or 2). The default number of Stop Bits is 1.

Password Enabled/ Disabled

Note: Main Page and consequently page sequence could be different, according to the flowing power and working tariff

Sealable terminal covers

Connectable IR Communication Modules

Cable stripping length and max terminal screw torque

Main terminals - Screw driver PZ1 0.5 Nm

Tariff and communication terminals Screw driver blade 0.8x3.5 mm 0.5 Nm

MID certified

A) Device code and certification data indications

B) Safety-sealing between upper and lower housing part
